John Runte, a Principal in the Consulting Practice of Baker Tilly Virchow Krause, LLP, joined the firm in 2002. Prior to joining Baker Tilly, he was an experienced manager at a national accounting and consulting firm, where he focused on providing technology and process solutions designed to enable organizations to achieve business results. He has extensive experience encompassing complex project management, process redesign, new product development, information system strategic planning, information system auditing, information system design, and implementation with a focus on integration technologies, information system auditing, business intelligence, data warehousing, and Enterprise Resource Planning (ERP).

Specific experience

John's experience includes enterprise applications, application integration, information system auditing and data warehousing solutions across public and private industry sectors. This experience scales from smaller enterprise clients to Fortune 50 multi-national organizations. A sampling of specific engagement experiences include:

- > State of Indiana – John and his team led the successful selection, design, development and implementation efforts for the Secretary of State and Indiana Election Division for the Statewide Voter Registration System. This project consisted of implementing the statewide registration system across ninety two counties in the State.
- > State of Wisconsin - John has led several initiatives for the State of Wisconsin across multiple departments to assess, plan, and implement enabling technologies reducing the cost and time associated with processes and technologies. Several of these initiatives have included structured software selections and application design activities.
- > Information System Auditing – John and his team have conducted many IT audit related engagements including SAS 70 type I and type II engagements, Sarbanes-Oxley 404 engagements, IT internal control engagements and outsourced internal audit engagements for IT.

Specific experience (cont.)

- > Multi-national conglomerate (data warehouse and business intelligence)
 - John managed and served as lead technical and business process design architect in an organizational reshaping initiative in which 11 independent divisions required consolidation into one corporate organization. John's team consisted of 9 client personnel and 11 consulting personnel focused on defining the organizational structure, the processes, and the technology required to provide the company with consolidated sales and profitability information by customer, product, and sales organization information. The project consisted of many challenging and dynamic phases including design, development, implementation, and rollout of an enterprise data warehousing solution.
